ABOUT

Designing the Future of Human-AI Interaction

With over 15 years of experience in product design and UX research, I've led design initiatives for enterprise platforms serving millions of users across fintech, education, and e-commerce sectors.

My work sits at the intersection of human-centered design and emerging AI technologies. I specialize in making complex systems intuitive, helping organizations leverage AI while maintaining the human touch that creates lasting connections.

Currently focused on building agentic AI frameworks and automation workflows that augment human capabilities rather than replace them.

COMPANIES I'VE WORKED WITH

IBM

Fiserv

Pearson

TD Ameritrade

Lord Abbett

WHAT I DO

Areas of Expertise

Bridging the gap between complex technology and human needs through research-driven design and strategic thinking.

AI & Machine Learning Design

Designing intelligent interfaces that seamlessly integrate AI capabilities while maintaining human-centered experiences.

UX Research & Strategy

Deep user research and strategic thinking to uncover insights that drive product decisions and user experiences.

Service Design

End-to-end service design that connects touchpoints and creates cohesive experiences across digital and physical channels.

Product Leadership

Leading cross-functional teams to deliver products that balance business goals, technical constraints, and user needs.
